Built with truckers and professional drivers in mind, our 24V inverters are compact, lightweight, and quiet in operation. Once connected to your battery, you get a stable and reliable power supply from the output socket ready to handle everything from small electronics to higher-wattage appliances, depending on the model you choose. What is a silicon carbide inverter? Our 800-Volt Silicon Carbide Inverter for Electrified Vehicles uses an innovative, double-side cooled silicon carbide (SiC) based power switch that delivers the higher power densities and efficiencies needed to extend battery range and performance, and reduce costs. How does a sic inverter work? The inverter's SiC technology can help extend electric vehicle range by c.5% and enables faster charging times at 800-volts when compared to today's 400-volt systems. SiC helps extend PHEV and BEV range by approximately 5% and enables faster charging times - delivering a better solution with more power, in a smaller package and for less cost. What is a dual inverter? Our Dual Inverter range combines different power electronic technologies into one compact package. A single unit can control and drive two electric motors - providing unrivalled functionality while delivering cost reductions and bringing flexible packaging solutions that are lighter, smaller and easier to install.
