

## Estonian energy storage power generation

In August, Eesti Energia announced the start of development for Estonia's first pumped-storage hydroelectric power plant (PSH). The project is located in the Estonia Mine industrial area in Ida-Virumaa and aims to become operational by 2025. Overview Energy in Estonia has heavily depended on coal and Estonia are two of the last countries in the world. The National Energy and Climate Plan published in 2019 aims to reduce greenhouse gas emissions by 70% by 2030 and by 80% by 2050. Renewable energy must be at least 42%, with a target of 16 TWh in 2030. Amidst geopolitical tensions, Estonia took decisive action to reduce its reliance on Russian energy sources, particularly in response to Russia's invasion of Ukraine. Previously heavily dependent on Russian imports for electricity, according to the IRENA, in 2022, renewable energy accounted for 32% of Estonia's Total Energy Supply (TES). The composition of this renewable energy mix was heavily dominated by wind and solar. Estonia inaugurates its largest battery energy storage project. Estonia's Auvere BESS project is designed to participate in both the electricity exchange and other energy markets to ensure the security of electricity supply. According to Eesti Energia board member Kristjan Kuhl, "WHAT ARE THE ENERGY STORAGE PROJECTS IN ESTONIA?" The firm behind the energy storage project is the Estonian startup Zero Terrain, and they are not shy about touting the supply chain advantages of hydropower over other systems. Estonian Government approves Long-Term Energy Development Plan. It is the only permitted greenfield pumped hydro energy storage project in the Northern Baltic region and will become the largest facility of its kind in Estonia. Construction of the project is set to begin in 2023. EC clears EUR-750m Estonian state aid scheme to create strategic electricity reserve aimed at ensuring energy security in the Baltic region. The European Commission (EC) said on Tuesday it had approved a EUR-750-million (USD 874.4m) Estonian state aid scheme to create a strategic electricity reserve aimed at ensuring energy security in the Baltic region. Baltic Storage Platform secures landmark EUR85.6M financing for battery energy storage project. The Baltic Storage Platform joint venture - bringing together French independent solar power producer Corsica Sole, Estonia's leading renewable energy developer Evecon, and Mirova, an affiliate of Natixis Investment Management, has secured financing for a battery energy storage project in Estonia. What are Estonia's policies on energy storage? Estonia's legislative framework underscores its commitment to renewable energy, with laws mandating that 100% of electricity consumption be sourced from renewables by 2030. Baltic Storage Platform Secures EUR85.6M Financing for Battery Energy Storage Project. Baltic Storage Platform JV--a French-based independent solar power company, Corsica Sole, and Estonian major renewable energy developer Evecon, alongside Mirova, a group of the National Investment Bank (NIB) finances two large-scale battery energy storage projects. NIB has signed a EUR 27.7 million 10-year loan agreement with Baltic Storage Platform O&#220; to finance the construction of two battery energy storage projects, Hertz 1 and Hertz 2, in Estonia. The investment supports Estonia's first pumped hydro energy storage system, Zero Terrain Paldiski, is making waves with its unique design and ambitions to store enough power for all Estonian households.
