What was Ancient Greek astronomy? Ancient Greek astronomy was the study of the universe to understand how it functioned and why apart from the established theistic model that claimed all things were ordered and maintained by the gods. Ancient Greek astronomers relied on observation and mathematical calculation to determine the operation of the universe and Earth's place within it. What are the Greek names of the planets? Here we will present the Greek names of the planets, as they were given by the ancient Greeks and modern astronomers. There are also several astronomical terms with a Greek origin. For instance, the word Galaxy comes from the Greek Galaxias, the Greek name for Chaos is Haos, while the word planet comes from the Greek word Planitis. Who is the greatest Greek astronomer? The greatest Greek astronomer is Hipparchus of Nicea (l. c. 190-c. 120 BCE). He created accurate models for the motion of the planets, the first star chart, and developed mathematical principles for calculating astronomical events. Who is the Father of Greek Astronomy? What is a solar astronomy device based on? The device, discovered in , is modeled on Babylonian astronomical principles correlated with Egyptian astronomy, but manufactured in Greece and featuring letters of the Greek alphabet. By turning a crank on the device, one could calculate the position of planets, the Sun, Moon, and when an eclipse was most likely to occur. What was the culminating work of Greek astronomy? The culminating work of Greek astronomy is the Almagest of Claudius Ptolemaeus (2nd century ce). Ptolemy built on the work of his predecessors--notably Hipparchus --but his work was so successful that it made older works of planetary astronomy superfluous, and they ceased to be read and copied. Which astronomical terms have a Greek origin? There are also several astronomical terms with a Greek origin. For instance, the word Galaxy comes from the Greek Galaxias, the Greek name for Chaos is Haos, while the word planet comes from the Greek word Planitis. We chose to present the planets according to their distance from the sun. Sun - Helios Astronomy - Ancient Greece, Stars, Planets: Astronomy is present from the beginning of Greek literature.
