

Indonesia's energy storage product exports will be restricted

Why is Indonesia limiting exports of raw minerals? Riding on the global energy transition, Indonesia is aiming to limit exports of the country's raw minerals in order to encourage investment in locally based processing facilities. So far, this strategy seems to be yielding the desired results, with foreign investment rising strongly. How does Indonesia's export ban affect foreign investment? The potential impact of the export ban is examined using datasets that illustrate a shift in the composition of Indonesia's exports to higher-value nickel products, increases in downstream production, and more foreign investment in Indonesia following the ban. How is Indonesia regulating exports? As part of its efforts to strengthen domestic industries and promote economic resilience, the Indonesian government is taking an active role in regulating export activities. One of the key instruments in this strategy is the issuance of a new regulation governing the list of export-banned commodities. Will Indonesia stop exports of raw commodities? President Joko Widodo of Indonesia has publicly stated that he intends to wean the country off exports of raw commodities by forcing producers to conduct processing and manufacturing onshore. To that end, he led the ban of nickel ore exports in 2020, limiting exports to refined products. Why has Indonesia shifted from exporting resources to storing natural resources? This development would also be in line with the demand for copper that has elevated since the increase of projects in renewable energy power plants in Indonesia. As a result, Indonesia has commenced its shift from exporting resources (for example, nickel ore for smelters) to storing domestic natural resources. Can a company export mineral concentrates in Indonesia? These licenses allowed companies to export mineral concentrates.⁵³ Following an announcement in August 2020, Indonesia reinstated the full export ban as of January 1, (earlier than the January date previously announced), which essentially halted all exports of nickel ores and concentrates.⁵⁴ The Indonesian government, through the Ministry of Finance ("MOF"), has issued a new regulation to implement the latest export ban policy introduced under Ministry of Trade ("MOT") Regulation No. 9 of concerning the Third Amendment to MOT Regulation No. 23 of 2018. The Indonesian government, through the Ministry of Finance ("MOF"), has issued a new regulation to implement the latest export ban policy introduced under Ministry of Trade ("MOT") Regulation No. 9 of concerning the Third Amendment to MOT Regulation No. 23 of 2018. A few years ago, Indonesia banned the export of nickel ore. The explicit goal of this policy was to boost downstream industrial capacity by forcing companies to build smelters in Indonesia and refine the nickel locally. Because Indonesia has the largest reserves of nickel ore in the world, the idea Indonesia is home to 22% of the world's nickel reserves, and its ban on nickel ore exports since 2020 has caused major shifts in the supply chains of strategic products such as electric vehicles and rocket engines. Arsalan Ahmed discussed this issue with Michael Merwin, an expert on international law. TEMPO, Jakarta - Indonesian Minister of Energy and Mineral Resources Bahlil Lahadalia claimed that the supply of industrial gas, which was previously reported to have decreased, has now returned to normal. He mentioned that one of the steps taken was to reduce the allocation of gas for export. The Indonesian government, through the Ministry of Finance ("MOF"), has issued a new regulation to implement the latest export ban
