

Moldova solar irrigation system

The project is funded by a EUR49m loan from the French Development Agency and an investment grant of more than EUR18m from the European Union. The aim is for the system to cover nearly 1,800 hectares, but currently only 1,300 are being irrigated.

Agrivoltaics in Moldova: A Solar Module Business Opportunity Explore the business case for producing specialized agrivoltaic solar modules in Moldova. Learn how this technology can support farms and energy independence. (VIDEO)

Drought challenges farmers and the government. We need to move to more economical irrigation techniques with sensors at different depths, drip irrigation, and micro-sprinkler irrigation that allow maximum use of water resources. Innovative irrigation systems boost productivity of Two Moldovan orchards use innovative and modern irrigation systems, installed with the support of the Government of Romania, provided via a project implemented by the UNDP. One farmer that benefits from **Solar Powered Irrigation: A Sustainable Solution** One of the most promising advancements in agricultural technology is the solar-powered irrigation system. This innovative system harnesses the power of the sun to pump water for irrigation, making it an **The Republic of Moldova invests in agriculture: Currently, in the Republic of Moldova, three large projects are being implemented to repair irrigation systems for agriculture, said the Minister of Agriculture and Food Industry, Vladimir Bolea.**
