Is peak shaving energy storage a necessity? In an era of rising electricity costs, unpredictable peak demand charges, and growing pressure for energy independence, peak shaving energy storage is no longer a luxury--it's a necessity. What is energy arbitrage & peak shaving? Here, we give you a rundown of everything you need to know about energy arbitrage and peak shaving within the storage market. What is energy arbitrage? Energy arbitrage entails the purchasing of energy commodities at times of low pricing and selling it during periods of high pricing, aiming to yield profits. What is peak shaving? Peak shaving is often achieved by implementing demand response strategies, such as temporarily reducing non-essential energy consumption or, increasingly more common, deploying onsite energy storage systems to meet peak demand internally without relying on the grid. What is BESS-enabled peak shaving? Furthermore, BESS-enabled peak shaving aligns seamlessly with the global movement toward cleaner energy sources, exemplified by the growing adoption of renewable energy technologies. This alignment showcases a shift toward a more sustainable energy landscape. The urgency of addressing peak energy demand is undeniable. Is peak shaving a viable strategy for battery energy storage? Amid these pressing challenges, the concept of peak shaving emerges as a promising strategy, particularly when harnessed through battery energy storage systems (BESSs, Figure 1). These systems offer a dynamic solution by capturing excess energy during off-peak hours and releasing it strategically during peak demand periods. Is peak shaving a viable strategy for grid operators? If left unchecked, peak demand periods might see grid operators grappling with shortages that could surpass current levels by 10% or more. Amid these pressing challenges, the concept of peak shaving emerges as a promising strategy, particularly when harnessed through battery energy storage systems (BESSs, Figure 1). Energy storage (ES) can mitigate the pressure of peak shaving and frequency regulation in power systems with high penetration of renewable energy (RE) caused by uncertainty and inflexibility. However, Energy arbitrage and peak shaving in the A key part to making energy storage systems financially viable is energy arbitrage and peak shaving.
