

## South Africa Distributed Energy Storage Classification

Comprehensive review of distributed energy systems (DES) in terms of classifications, technologies, applications, and policies. Discussion on the DES policy landscape for the developed, the developing and the emerging economies. Reflection on the challenges facing DES and the prospective solutions. huge renewable energy potential. Through research and study dissemination, capacity building programmes and stakeholder engagement, we strive to create an enabling environment for the implementation of renewable energy projects in the region and drive the just energy transition in South Africa.

**Battery Energy Storage Facility (BESF)** means a facility that comprises of batteries, chargers, power converters and related equipment connected to a single point of connection (POC) on the National Interconnected Power System (NIPS) for the purpose of storing electrical energy in the batteries.

**Battery Energy Storage Systems (BESS)** is one of Eskom's strategic programmes/technology, aimed at diversifying the generation energy mix, by pursuing a low-carbon future to reduce the impact on the environment. Eskom has taken the necessary steps to ensure the successful implementation of BESF in South Africa, that energy storage can resolve. Policies need to be investigated, created and /or adapted to enable the development of a battery energy storage power sector. The IRP modelling boundaries development are by far not fully exploited. Proximity "generated" by the storage system. South Africa is facing ongoing capacity shortages and load shedding have plagued South Africa for most of the past ten years, caused by declining availability of its ageing coal fleet. Load shedding is the deliberate stoppage of electrical power supply by system operators as a preventive measure to maintain system integrity. Investments are expected to be worth up to USD 100 billion by 2030 and more than USD 660 billion by 2050. CSP is slowly gaining pace, approaching the 1 GW mark from a few hundred megawatts just a few years ago. The declining cost and improving viability of battery storage as well as numerous applications.

**Distributed energy systems: A review of classification, Comprehensive review of distributed energy systems (DES) in terms of classifications, technologies, applications, and policies. Discussion on the DES policy landscape for the developed, the developing and the emerging economies. Reflection on the challenges facing DES and the prospective solutions.**

**REGULATORY ASSESSMENT OF BATTERY ENERGY STORAGE SYSTEMS** outages known as load-shedding. Increasing the share of renewables in South Africa's electricity grid and commensurate use of Battery Energy Storage Systems (BESS) will be an essential strategy. **ENERGY REGULATOR (NERSA)**'Battery Energy Storage Facility Owner' means a legal entity that is licensed or registered to develop and operate a BESF. 'Codes' means the Distribution Code, the Transmission Code.

**Battery Energy Storage System** Currently, the Eskom BESS rollout programme is the largest to be implemented in South Africa. BESS, or Battery Energy Storage Systems, stores electricity in batteries for on-demand power.

**South African energy storage regulations**The South African Energy Storage Association (SAESA) was constituted in March, 2018, to advocate and advance the development of an energy storage industry in Southern Africa.

**Distributed energy storage and centralized energy storage**We analyze an energy storage facility location problem and compare the benefits of centralized storage (adjacent to a central energy generation site) versus distributed storage (localized at various sites).

**SAESA - South African Energy Storage Association**To create a more resilient, accessible, efficient, sustainable, and affordable energy

## South Africa Distributed Energy Storage Classification
