Installing storage without solar can help provide backup power, but with one important caveat: you'll have no way to recharge your battery while the grid is still down. Should you install a solar-plus-storage system? For those seeking longer term resilience, a solar-plus-storage system may still be the best choice, as the focus of the program is to provide 'grid services' and a few hours of backup power during short outages. However, it may not be the best solution for longer-duration backup power during prolonged outages.
